

Contents

Physics of Fundamental Interactions and Particles	1
1 Production and Spectroscopy of Antihydrogen	1
1.1 Antihydrogen production efficiency	1
1.2 Dynamics of antihydrogen formation	4
1.3 Measurements and improvements on detector performances	6
1.4 R&D for laser spectroscopy	9
2 Rare Kaon Decays at Brookhaven AGS	11
2.1 BNL E-865: a search for lepton flavor violation in K^+ decay	11
2.2 BNL E-926: a study of the CP-violating rare decay $K_L^0 \rightarrow \pi^0 \nu \bar{\nu}$ (KOPIO)	14
3 Particle Physics at DESY/HERA (H1)	20
3.1 Electron–proton collisions at a centre of mass energy up to 320 GeV	20
3.2 Status of the HERA accelerator	20
3.3 Commissioning and first operation of the new z -vertex trigger	21
3.4 Activities of the Polarimeter group	24
3.5 Results from recent analyses	25
3.6 Progress of Zürich analysis projects	28
4 High-precision CP-violation Physics at LHCb	36
4.1 The LHCb experiment	36
4.2 Silicon tracker	37
4.3 TT station	38
4.4 Optical readout link	40
4.5 Event simulation	41
4.6 Physics studies	41
4.7 Summary and outlook	41
5 The DØ experiment	43
6 Particle Physics with CMS at LHC	45

6.1	Development of pixel sensors	45
6.2	Development of the pixel readout chip	48
6.3	Event reconstruction software	50
	Condensed Matter Physics	53
7	Superconductivity and Magnetism	53
7.1	Studies of isotope effects in novel superconductors	53
7.2	Studies of pressure effects in novel superconductors	58
7.3	Spectroscopic studies of novel superconductors	60
7.4	Magnetometry of cuprate superconductors	64
8	Phase transitions, thermal transport and new materials	67
8.1	Phase transitions in superconductors	67
8.2	Thermal transport	70
9	Surface Physics	72
9.1	The spin-structure of the Shockley surface state on Au(111)	73
9.2	Localization of surface states in disordered step lattices	74
9.3	Synthesis of one monolayer of hexagonal boron nitride on Ni(111) from B-trichloroborazine (ClBNH) ₃	76
9.4	Boron nitride nanomesh	77
9.5	<i>h</i> -BN/Pd(110): a hexagonal covalent network on a rectangular substrate	78
9.6	Doping induced reorientation of C ₆₀ molecules on Ag(111)	79
9.7	Automated determination of coexisting inequivalent orientations of C ₆₀ molecules on Ag(111)	80
9.8	Temperature-dependent charging of monolayer C ₆₀ on <i>h</i> -BN/Ni(111)	81
9.9	Direct determination of the absolute conformation of tartaric acid on Cu(110)	83
9.10	Time-resolved electron diffraction: space-charge dynamics as tool for characterization	84
10	Physics of Biological Systems	87
10.1	Studies of single DNA molecule in liquids	87
10.2	Towards the limits of holography with low energy electrons	88
10.3	Cryogenic LEEPS microscopy	89
0.	<i>CONTENTS</i>	

10.4	Structure of individual bio molecules	89
10.5	Nanometer-sized structures for creating and investigating mesoscopic physics devices	91
10.6	Field ion microscopy	91
10.7	Field emission microscopy to study the diffusion of Cs adsorbed on tungsten surfaces.	92
11	Computer Assisted Physics	93
11.1	Electronic structure of high- T_c materials	93
11.2	Time series analysis of EEG	98
	 Infrastructure and Publications	 101
12	Mechanical Workshop	101
13	Electronics Workshop	103
14	Publications	104
14.1	Research group of Prof. C. Amsler	104
14.2	Research group of Prof. H. Keller	107
14.3	Research group of Prof. P. F. Meier	112
14.4	Research group of Prof. J. Osterwalder	114
14.5	Research group of Prof. U. Straumann	118
14.6	H1 publications by the groups of Straumann and Truöl	121
14.7	Research group of Prof. P. Truöl	123
